If you answered "Other" please tell us an area you would like to see more programs offered.	Size (adequate space) Very Satisfied
Since it is a library, I would like there to be a book club and maybe even a meeting where we get together and write like a novel or stuff like that.	Very Satisfied

Cleanliness	Furniture & Furnishings	Number of Computers	Comment	Are you:	How old are you?		
Very Satisfied	Very Satisfied	Not Very Satisfied	Definitely need more computers. It is hard doing homework when there are so many people trying to use the computer. It makes me feel bad and it is too much of a hassle so sometimes I just leave and do my homework somewhere else. I don't like doing!	Male	25 - 39 years		
Very Satisfied	Very Satisfied	Not Very Satisfied		Female	18 - 24 years		

Additional comments
the library ladies are nice

I love the bookmobile...it gives me a place where I can go to and get away from home. I wish they had more programs though. Either for teens or for young adults (18-24).

Dear Joanne:

Congratulations! The State Library and Archives of Florida is pleased to inform you that you have been selected to participate in the 2009-2010 Sunshine State Library Leadership Institute.

To finalize your acceptance, please complete the enclosed Institute Acceptance Form and the Mentor Selection Form. Return them to Brad Ward by e-mail at brad@neflin.org or fax to 904.278.5625 by **September 9, 2009**.

Your Institute Registration Fee is also due by **September 9, 2009**. Make your check payable in the amount of \$150.00 to: NEFLIN. Mail to: NEFLIN, 2233 Park Avenue, Suite 402, Orange Park, FL 32073.

The Leadership Institute wiki (<http://ssli-alumni.pbworks.com>) is our primary electronic communication tool that will be used throughout the Institute to distribute materials and information, and to communicate with each other.

We encourage you to spend some time familiarizing yourself with the Leadership Institute wiki. While you are on the wiki, be sure to read the **FAQ**, add your **Introduction** and check out the **Directory of Participants and Mentors** to learn about your fellow Institute participants. You may also add photos.

If you have any questions about the Institute, please contact Jill Canono at jbcanono@dos.state.fl.us. Questions about the forms, deadlines, and use of the wiki should be addressed to brad@neflin.org or 904.278.5620.

Again, congratulations and we look forward to seeing you at the first session on October 28.

Sincerely,

Jill Canono, Ph.D.
Library Leadership Program Consultant

SECTION 6 – CONCLUSIONS	34

SECTION 6 – CONCLUSIONS

The scope of this Technical Memorandum entails conducting a sensitivity analysis for CR 470 / I-75 interchange to determine if and when the operations of the interchange will fail based on the anticipated development of the City of Wildwood and surrounding areas. This analysis included an evaluation of the existing at-grade CSX Transportation, Inc. railroad crossing located immediately east of the intersection of CR 470 and CR 475.

The operational analysis of Design Year (2035) traffic indicates that the CR 470 and I-75 interchange area, including the at-grade railroad crossing is projected to operate at an acceptable level of service. Based on these analyses, the improvements proposed in the I-75 PD&E Study (FIN 242626-1-22-01) and documented in this report are sufficient to accommodate the anticipated Design Year (2035) conditions. Future growth in the City of Wildwood and Sumter County is projected to result in higher traffic growth rates on US 301 and CR 470 from US 301 to Florida's Turnpike than on CR 470 between US 301 and I-75. This is attributable to predicted future development being concentrated east of US 301 and the proximity of Florida's Turnpike to that development.

The recommended lane configurations for the I-75 / CR 470 interchange are shown in Figure 10.

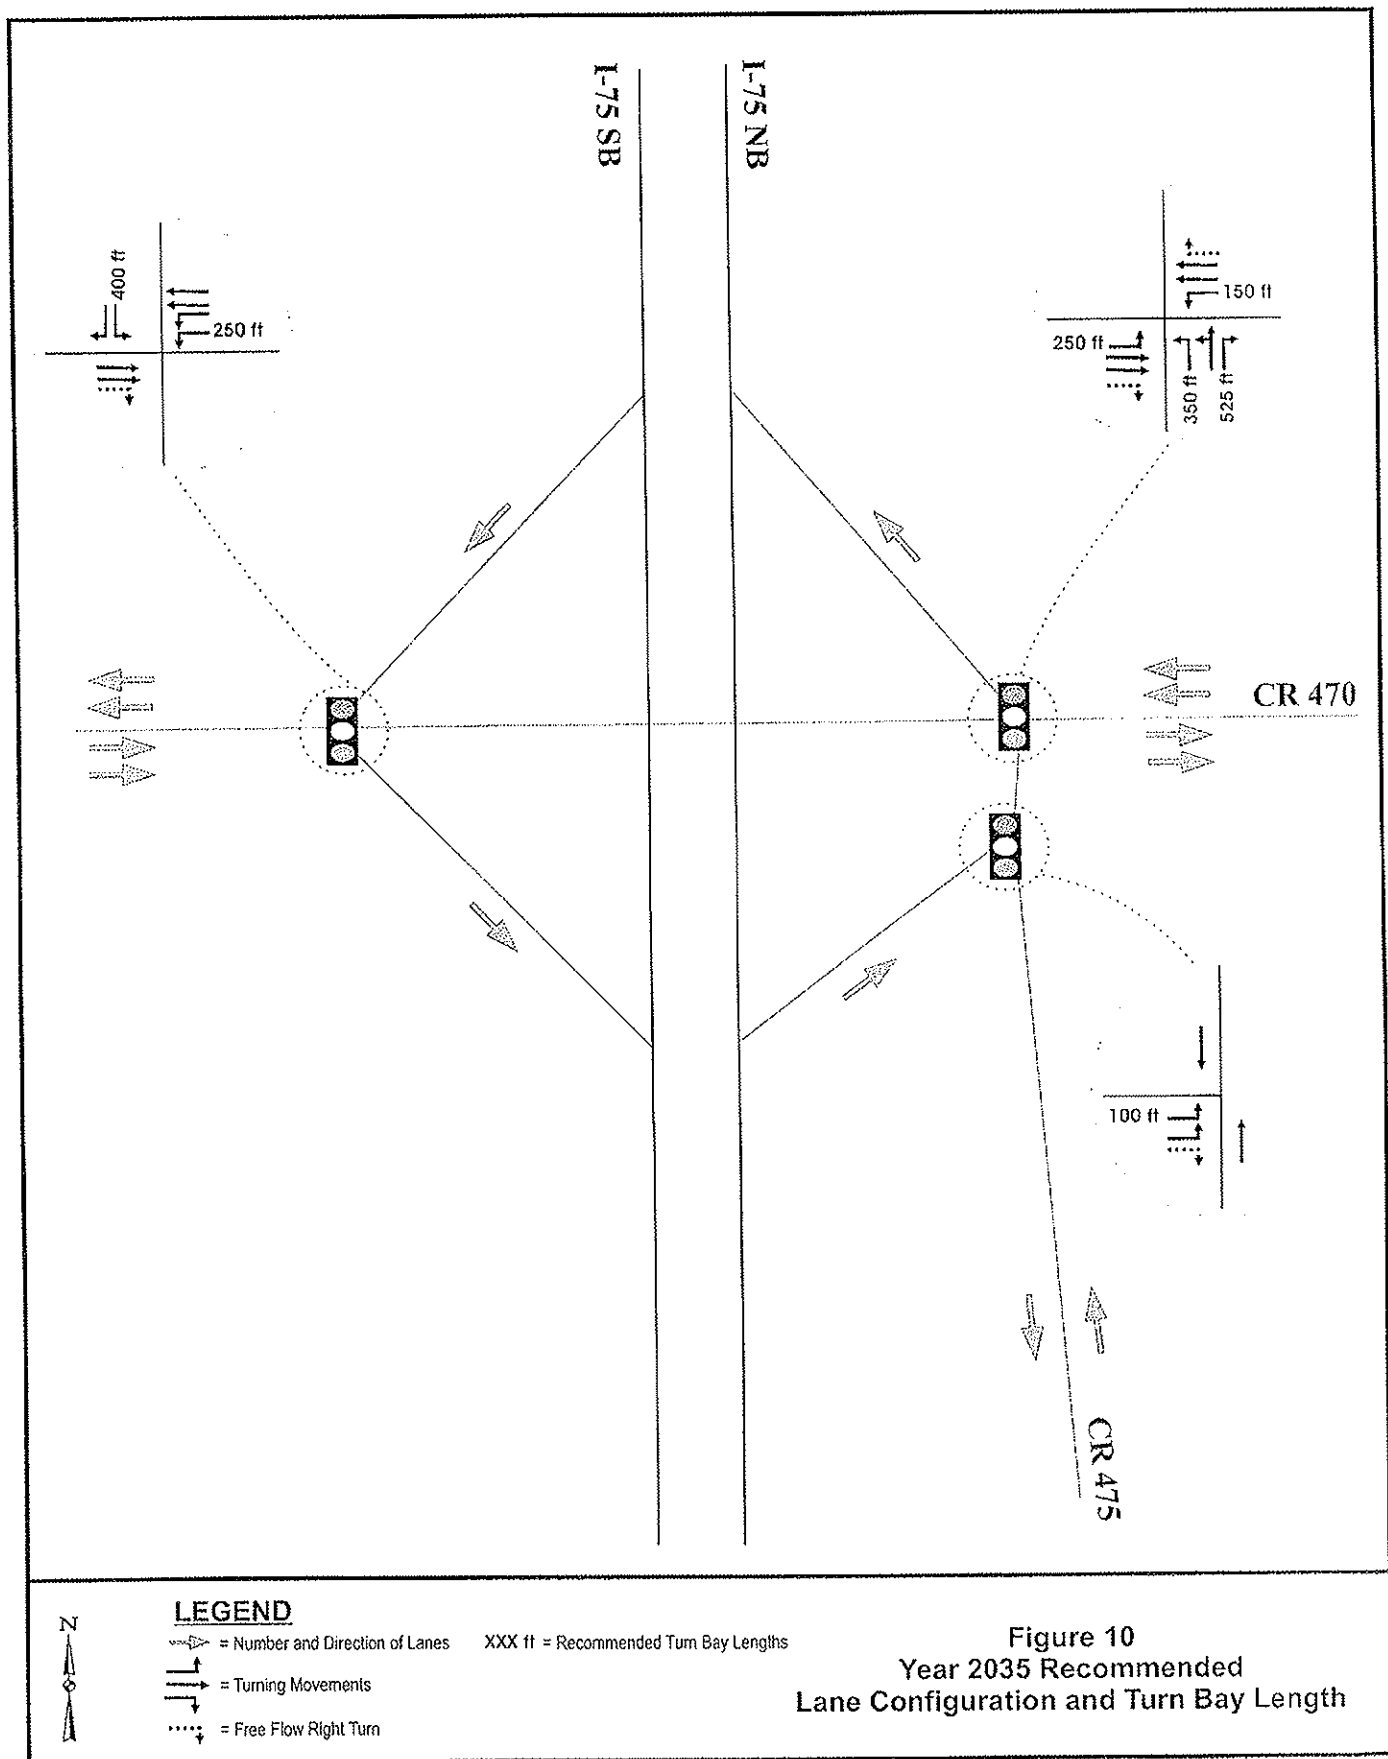

The existing operation of both the southbound I-75 ramp terminal intersection and the CR 470/CR 475 intersection is LOS A for both the AM and PM peak hours. The southbound I-75 ramp terminal intersection is projected to operate at LOS C in both the a.m. and p.m. peak hours in the Design Year (2035). The CR 470/CR 475 intersection in Year 2035 is projected to operate at LOS C in both a.m. and p.m. peak hours in the Design Year (2035). When the at-grade rail crossing on CR 470 is closed, the northbound and southbound I-75 to eastbound CR 470 movements will be impacted; however, the operations of the traffic signals at the CR 470/CR 475 intersection will be preempted to allow westbound CR 470 traffic from northbound I-75 and CR 475 to continue uninterrupted; eastbound CR 470 through traffic will be restricted when the crossing is

closed. Improvements to the CR 470 interchange with I-75 will increase storage capacity along CR 470 under I-75 with two through lanes in each direction proposed.

A simulation study was conducted using VISSIM to evaluate the impact of the CSX Transportation, Inc. railroad at-grade crossing of CR 470 east of the intersection of CR 475. The simulations indicated that the queues resulting from a train crossing during the peak hours would not adversely impact the traffic operations and no additional improvements are required to accommodate trains during the peak hours. The simulations indicated a slight increase in average delay and queue length at the intersections with the introduction of an additional train during the peak period. All ramps are slightly impacted by the additional train however this impact does not produce significant queues that affect the I-75 mainline operation.

The following roadway changes from the SR93 (I-75) PD&E study (Financial Project ID 242626-1) shall be incorporate in the final design of the CR 470/I-75 Interchange:

1. Provide dual left-turn lanes for the westbound CR 470 to southbound I-75 on-ramp.
2. Provide dual left-turn lanes for the northbound I-75 off-ramp intersection with CR 475.
3. Provide an additional northbound lane on CR 475 from the northbound I-75 off-ramp to CR 470.
4. Provide a 525 foot right-turn bay for northbound CR 475 at the intersection with CR470.
5. Lane configuration for the northbound approach on CR 475 at its intersection with CR470 shall be one left turn, on shared left-turn/through lane, and one right-turn lane.

August 28, 2009

Garry Breeden, Chairman
Sumter County Board of County Commissioners
901 N. Main Street
Bushnell, Florida 33513

Dear Chairman Breeden,

During our last Village Community Development District #3 Board meeting, a resident provided comments and a sample sign to provide an improved communication for drivers when approaching and utilizing the Roundabouts. The District Board believes the signage accurately reflects the proper utilization as depicted in the Guide prepared by Sumter County.

Enclosed is a copy of the sign that is recommended. After lengthy discussion and review of the sign, our Board believes it provides a better visual depiction of the proper driving pattern and, as a result, a safer use of the roundabout for both residents and visitors not familiar with them. The District Board would support the review and installation of this type of signage at all traffic circles within Sumter County. More specifically, at this time, we are requesting the Savannah Center traffic circle be used as a "test" location to receive feedback from residents and law enforcement as to the efficacy of the recommended signs.

We would appreciate Sumter County's review of this request and welcome the opportunity to discuss this matter further if it would help in your deliberation. Please do not hesitate to contact me or District Manager, Janet Tutt, should you have any questions.

Sincerely,

Charles F. Cook

Subject: FW: No Trespassing Signs
Attachments: No Trespassing Sign.pdf; No Trespassing Sign 2.pdf

Here are several options. The signs at the outlet have two signs cost of \$15.80 each We have put the information on one sign @ \$13.21 each.

The road frontage of I-75 is 8000 feet. 200 feet apart will be 40 signs plus 2 signs at each gate. Going with the cheaper sign it will be \$554.82 for the signs only.

We are going to cut a 12 foot u post in half to save money on the u post. They are \$16.76 each. You will need 21 \$ 351.96

Around \$906.78 for signs and post at 200 feet apart. Or go further apart? 400 feet apart \$ 450.00

Let me know what you want to do.

Board of County Commissioners
Of Sumter County
910 N. Main Street, Room 201
Bushnell, Florida 33513-6146

Dear Commissioners:

Enclosed is the report of activities and expenditures of the Sumter County Health Department for the periods October 1, 2008 through June, 2009. Chapter 154, F.S., and the contract between the Department of Health and Sumter County require these reports be submitted on a quarterly basis.

These reports are made up of the following sub-reports produced by the Department's Contract Management System.

1. DE 385 – "Contract Management Variance Report" which compares the planned services, clients/units, FTEs and expenditures with actual figures.
2. DE 580 – "Analysis of Fund Equities" shows total CHD year-to-date revenues, expenditures, beginning cash balance and year-to-date equity. In accordance with Chapter 154, this report also splits cash balances/equity into state and county components.
3. "Sumter County Health Department Program Service Variance Analysis" which explains variances in actual expenditures that is greater or less than 25 percent of planned expenditure levels.

If you have any questions, please feel free to contact me at (352) 793-6979, extension 248.

Sincerely,

Girija S. Padmanabh, M.D., M.P.H.
Director

**SUBJECT: REQUEST FOR APPLICATION NOTICING - RECEIPT OF
WATER USE PERMIT APPLICATIONS
INTERESTED PARTIES ID # 000132**

Dear MICHAEL FRANCIS

Enclosed is a computer generated report for the above referenced application(s) entered into the District Regulatory Database System (RDBS) during the week of AUGUST 15, 2009 - AUGUST 21, 2009.

Interested persons have the opportunity to inspect a copy of any permit application and submit written comments concerning the application. In addition, if you wish to be advised as to agency action and opportunity to request an administrative hearing regarding an application, you must file a written request with the SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT, REGULATION PERFORMANCE MANAGEMENT, 2379 BROAD STREET, BROOKSVILLE, FL 34604-6899. Any comments or requests filed at the above address must be received by the department no later than 14 days after the date of this notice and must include the permit application number.

Please contact me at (352) 796-7211 or 1-800-423-1476 (toll free in Florida only) Extension 4180 if I can be of any further service in this matter.

Sincerely,

(Signed)
HEATHER MOCK
Regulation Performance Management Department

ENCLOSURE(S) - As stated

The District does not discriminate based on disability. Anyone requiring reasonable accommodation under the ADA should contact the Regulation Performance Management Department at (352) 796-7211 or 1-800-423-1476 (FL only); TDD only: 1-800-231-6103

Re: Population Projections
Sumter County and the City of Wildwood

Dear Messrs. Arnold and Smith:

Thank you for the submittal of your residential needs analysis and historical population data and structural changes projected for Sumter County and the City of Wildwood. I apologize for the greatly delayed reply. I regret to inform you that the District cannot recommend this planning tool as part of your comprehensive planning.

The Notice of Intent issued by DCA in June 2009 found the City's projected population "not based on professionally accepted methodology" and Wildwood's land use plan allocating "more than 46 years of growth which is far in excess of what is needed for the 2035 planning horizon." As indicated in the City's 2009 Residential Needs Analysis, the Wildwood annexations since 2005 have expanded the municipal boundaries by at least 700%. Additionally, DCA found the population methodology "inconsistent with the projections used by the Sumter County School Board and the Lake-Sumter Metropolitan Planning Organization."

We continue to recommend that Wildwood and Sumter County review long-term population projections that are consistent with BEBR medium range/SWFWMD population estimates. The District's population projections for the years 2010-2030 are utility-specific projections that are based on infrastructure improvements, Certificates of Occupancy, environmental resource permitting, and historical/current land use and re-zonings. Please refer to the attachments for additional information.

The District concurs with DCA in recognizing the City's intensive planning efforts and the major revisions for the Wildwood Comprehensive Plan 2008-2035. However, the District's primary concern remains the large annexation areas that require water supply planning and related infrastructure, and the lingering effects of the current economic crises. Should you have any additional questions, please contact me at extension 4403. We look forward to working with Sumter County and the City of Wildwood to ensure beneficial water resources for future growth.

(7) 1-10 Drought Year Demand													24,769	28,468	33,987	35,814	38,868

Notes:

MGD = million gallons per day

(1) From SWFWMD, 2005 *Estimated Water Use Report*, Table A-1 (June 2007).

(2) Estimated using average 2003-2007 GPCD, as provided in Table A-1 of the District's reports titled *Estimated Water Use, 2003-2007*.

(3) Projected County Population source for years 2010-2030 are utility specific projections based on GIS Associates Population Projection Model, "The Small Area Population Projection Methodology of the Southwest Florida Water Management District," GIS Associates, February 2006.

(4) For utilities with at least 0.1 mgd average annual withdrawal (i.e., the utilities individually listed in the table), year 2003-2007 average estimated per capita water use rates, as provided in Table A-1 of the District's reports titled *Estimated Water Use, 2003-2007* were used to project demands. See footnotes 6 and 8 for descriptions of the per capita used for the Domestic Self-Supply and Small Utility.

(5) Computed as projected population multiplied by 2001-2005 average per capita water use.

(6) County residential per capita rate from the District's reports titled *Estimated Water Use, 2003-2007* was used to calculate average estimated 2003-2007 usage, Table A-2. If a county residential per capita rate was not available, the District's 2003-2007 average residential per capita rate was used.

(7) 1-10 Drought Year Demand is calculated as 1.06 x Projected Future Water Use.

(8) Small Utility population is the "Additional Population" of Table 1, 2005 *Estimated Water Use, District (June 2007)*. Small Utility 2005 Population Unit Use (Per Capita) is defined as follows: [the sum of "Estimated Water Use" and "Reported Water Use" on Table 1] divided by the "Additional Population" from Table 1 of the District's reports titled *Estimated Water Use (2003-2007)*.

(9) Additional Irrigation Demand is defined as water demand from residential irrigation wells utilized by residents that depend upon a centralized system for indoor water needs. See attached table.

Projections of Florida Population by County, 2008–2035 (continued)

Subject: Section 403.973, F.S. re: expediated permitting
Attachments: 403.973.doc

County Lobbyists,

House staff are working on proposed revisions to Section 403.973, F.S., which many of you know is the expedited permitting statute. The changes they are considering proposing include:

- (1) Eliminating the job number requirement;
- (2) Allowing counties to create "pre-permitted areas" (terminology subject to change, I'm sure). The concept is that the county could create an area where it wants to encourage growth, and when an application is submitted in that area, the county could agree (it sounded permissive, not required) to act as the go-between or facilitator (a role that is currently filled by OTTED and last year it was recommended that DEP take over this role);
- (3) Agencies would actually have shorter timelines for processing permits (this is not the case today, it's just conceptually supposed to be "expedited").

FAC has been asked to survey our members and determine whether anyone has a problem with these concepts. We will obviously need to carefully review the legislative language once we reach that stage. For now, I just need to know whether you find any of these concepts problematic. If you can get me comments in the next two weeks, I would appreciate it.

Thanks,

Diana

All About Florida

403.973 Expedited permitting; comprehensive plan amendments.--

(1) It is the intent of the Legislature to encourage and facilitate the location and expansion of those types of economic development projects which offer job creation and high wages, strengthen and diversify the state's economy, and have been thoughtfully planned to take into consideration the protection of the state's environment. It is also the intent of the Legislature to provide for an expedited permitting and comprehensive plan amendment process for such projects.

(2) As used in this section, the term:

(a) "Duly noticed" means publication in a newspaper of general circulation in the municipality or county with jurisdiction. The notice shall appear on at least 2 separate days, one of which shall be at least 7 days before the meeting. The notice shall state the date, time, and place of the meeting scheduled to discuss or enact the memorandum of agreement, and the places within the municipality or county where such proposed memorandum of agreement may be inspected by the public. The notice must be one-eighth of a page in size and must be published in a portion of the paper other than the legal notices section. The notice shall also advise that interested parties may appear at the meeting and be heard with respect to the memorandum of agreement.

(b) "Jobs" means permanent, full-time equivalent positions not including construction jobs.

(c) "Office" means the Office of Tourism, Trade, and Economic Development.

(d) "Permit applications" means state permits and licenses, and at the option of a participating local government, local development permits or orders.

(3)(a) The Governor, through the office, shall direct the creation of regional permit action teams, for the purpose of expediting review of permit applications and local comprehensive plan amendments submitted by:

1. Businesses creating at least 100 jobs, or

2. Businesses creating at least 50 jobs if the project is located in an enterprise zone, or in a county having a population of less than 75,000 or in a county having a population of less than 100,000 which is contiguous to a county having a population of less than 75,000, as determined by the most recent decennial census, residing in incorporated and unincorporated areas of the county, or

(b) On a case-by-case basis and at the request of a county or municipal government, the office may certify as eligible for expedited review a project not meeting the minimum job creation thresholds but creating a minimum of 10 jobs. The recommendation from the governing body of the county or municipality in which the project may be located is required in order for the office to certify that any project is eligible for expedited review under this paragraph. When considering projects that do not meet the minimum job creation thresholds but that are recommended by the governing body in which the project may be located, the office shall consider economic impact factors that include, but are not limited to:

1. The proposed wage and skill levels relative to those existing in the area in which the project may be located;

2. The project's potential to diversify and strengthen the area's economy;

3. The amount of capital investment; and

4. The number of jobs that will be made available for persons served by the welfare transition program.

(c) At the request of a county or municipal government, the office or a Quick Permitting County may certify projects located in counties where the ratio of new jobs per participant in the welfare transition program, as determined by Workforce Florida, Inc., is less than one or otherwise critical, as eligible for the expedited permitting process. Such projects must meet the numerical job creation criteria of this subsection, but the jobs created by the project do not have to be high-wage jobs that diversify the state's economy.

(d) Projects located in a designated brownfield area are eligible for the expedited permitting process.

(e) Projects that are part of the state-of-the-art biomedical research institution and campus to be established in this state by the grantee under s. [288.955](#) are eligible for the expedited permitting process, if the projects are designated as part of the institution or campus by the board of county commissioners of the county in which the institution and campus are established.

(4) The regional teams shall be established through the execution of memoranda of agreement between the office and the respective heads of the Department of Environmental Protection, the Department of Community Affairs, the Department of Transportation and its district offices, the Department of Agriculture and Consumer Services, the Fish and Wildlife Conservation Commission, appropriate regional planning councils, appropriate water management districts, and voluntarily participating municipalities and counties. The memoranda of agreement should also accommodate participation in this expedited process by other local governments and federal agencies as circumstances warrant.

(5) In order to facilitate local government's option to participate in this expedited review process, the office shall, in cooperation with local governments and participating state agencies, create a standard form memorandum of agreement. A local government shall hold a duly noticed public workshop to review and explain to the public the expedited permitting process and the terms and conditions of the standard form memorandum of agreement.

(6) The local government shall hold a duly noticed public hearing to execute a memorandum of agreement for each qualified project. Notwithstanding any other provision of law, and at the option of the local government, the workshop provided for in subsection (5) may be conducted on the same date as the public hearing held under this subsection. The memorandum of agreement that a local government signs shall include a provision identifying necessary local government procedures and time limits that will be modified to allow for the local government decision on the project within 90 days. The memorandum of agreement applies to projects, on a case-by-case basis, that qualify for special review and approval as specified in this section. The memorandum of agreement must make it clear that this expedited permitting and review process does not modify, qualify, or otherwise alter existing local government nonprocedural standards for permit applications, unless expressly authorized by law.

(7) At the option of the participating local government, appeals of its final approval for a project may be pursuant to the summary hearing provisions of s. [120.574](#), pursuant to subsection (14), or pursuant to other appellate processes available to the local government. The local government's decision to enter into a summary hearing must be made as provided in s. [120.574](#) or in the memorandum of agreement.

(8) Each memorandum of agreement shall include a process for final agency action on permit applications and local comprehensive plan amendment approvals within 90 days after receipt of a completed application, unless the applicant agrees to a longer time period or the office determines that unforeseen or uncontrollable circumstances preclude final agency action within the 90-day timeframe. Permit applications governed by federally delegated or approved permitting programs

whose requirements would prohibit or be inconsistent with the 90-day timeframe are exempt from this provision, but must be processed by the agency with federally delegated or approved program responsibility as expeditiously as possible.

(9) The office shall inform the Legislature by October 1 of each year which agencies have not entered into or implemented an agreement and identify any barriers to achieving success of the program.

(10) The memoranda of agreement may provide for the waiver or modification of procedural rules prescribing forms, fees, procedures, or time limits for the review or processing of permit applications under the jurisdiction of those agencies that are party to the memoranda of agreement. Notwithstanding any other provision of law to the contrary, a memorandum of agreement must to the extent feasible provide for proceedings and hearings otherwise held separately by the parties to the memorandum of agreement to be combined into one proceeding or held jointly and at one location. Such waivers or modifications shall not be available for permit applications governed by federally delegated or approved permitting programs, the requirements of which would prohibit, or be inconsistent with, such a waiver or modification.

(11) The memoranda of agreement shall include guidelines to be used in working with state, regional, and local permitting authorities. Guidelines may include, but are not limited to, the following:

(a) A central contact point for filing permit applications and local comprehensive plan amendments and for obtaining information on permit and local comprehensive plan amendment requirements;

(b) Identification of the individual or individuals within each respective agency who will be responsible for processing the expedited permit application or local comprehensive plan amendment for that agency;

(c) A mandatory preapplication review process to reduce permitting conflicts by providing guidance to applicants regarding the permits needed from each agency and governmental entity, site planning and development, site suitability and limitations, facility design, and steps the applicant can take to ensure expeditious permit application and local comprehensive plan amendment review. As a part of this process, the first interagency meeting to discuss a project shall be held within 14 days after the office's determination that the project is eligible for expedited review. Subsequent interagency meetings may be scheduled to accommodate the needs of participating local governments that are unable to meet public notice requirements for executing a memorandum of agreement within this timeframe. This accommodation may not exceed 45 days from the office's determination that the project is eligible for expedited review;

(d) The preparation of a single coordinated project description form and checklist and an agreement by state and regional agencies to reduce the burden on an applicant to provide duplicate information to multiple agencies;

(e) Establishment of a process for the adoption and review of any comprehensive plan amendment needed by any certified project within 90 days after the submission of an application for a comprehensive plan amendment. However, the memorandum of agreement may not prevent affected persons as defined in s. [163.3184](#) from appealing or participating in this expedited plan amendment process and any review or appeals of decisions made under this paragraph; and

(f) Additional incentives for an applicant who proposes a project that provides a net ecosystem benefit.

(12) The applicant, the regional permit action team, and participating local governments may agree to incorporate into a single document the permits, licenses, and approvals that are obtained through the

expedited permit process. This consolidated permit is subject to the summary hearing provisions set forth in subsection (14).

(13) Notwithstanding any other provisions of law:

(a) Local comprehensive plan amendments for projects qualified under this section are exempt from the twice-a-year limits provision in s. [163.3187](#); and

(b) Projects qualified under this section are not subject to interstate highway level-of-service standards adopted by the Department of Transportation for concurrency purposes. The memorandum of agreement specified in subsection (5) must include a process by which the applicant will be assessed a fair share of the cost of mitigating the project's significant traffic impacts, as defined in chapter 380 and related rules. The agreement must also specify whether the significant traffic impacts on the interstate system will be mitigated through the implementation of a project or payment of funds to the Department of Transportation. Where funds are paid, the Department of Transportation must include in the 5-year work program transportation projects or project phases, in an amount equal to the funds received, to mitigate the traffic impacts associated with the proposed project.

(14)(a) Challenges to state agency action in the expedited permitting process for projects processed under this section are subject to the summary hearing provisions of s. [120.574](#), except that the administrative law judge's decision, as provided in s. [120.574\(2\)\(f\)](#), shall be in the form of a recommended order and shall not constitute the final action of the state agency. In those proceedings where the action of only one agency of the state is challenged, the agency of the state shall issue the final order within 10 working days of receipt of the administrative law judge's recommended order. In those proceedings where the actions of more than one agency of the state are challenged, the Governor shall issue the final order within 10 working days of receipt of the administrative law judge's recommended order. The participating agencies of the state may opt at the preliminary hearing conference to allow the administrative law judge's decision to constitute the final agency action. If a participating local government agrees to participate in the summary hearing provisions of s. [120.574](#) for purposes of review of local government comprehensive plan amendments, s. [163.3184\(9\)](#) and (10) apply.

(b) Challenges to state agency action in the expedited permitting process for establishment of a state-of-the-art biomedical research institution and campus in this state by the grantee under s. [288.955](#) are subject to the same requirements as challenges brought under paragraph (a), except that, notwithstanding s. [120.574](#), summary proceedings must be conducted within 30 days after a party files the motion for summary hearing, regardless of whether the parties agree to the summary proceeding.

(15) The office, working with the agencies participating in the memoranda of agreement, shall review sites proposed for the location of facilities eligible for the Innovation Incentive Program under s. [288.1089](#). Within 20 days after the request for the review by the office, the agencies shall provide to the office a statement as to each site's necessary permits under local, state, and federal law and an identification of significant permitting issues, which if unresolved, may result in the denial of an agency permit or approval or any significant delay caused by the permitting process.

(16) This expedited permitting process shall not modify, qualify, or otherwise alter existing agency nonprocedural standards for permit applications or local comprehensive plan amendments, unless expressly authorized by law. If it is determined that the applicant is not eligible to use this process, the applicant may apply for permitting of the project through the normal permitting processes.

(17) The office shall be responsible for certifying a business as eligible for undergoing expedited review under this section. Enterprise Florida, Inc., a county or municipal government, or the Rural Economic Development Initiative may recommend to the Office of Tourism, Trade, and Economic Development that a project meeting the minimum job creation threshold undergo expedited review.

(18) The office, working with the Rural Economic Development Initiative and the agencies participating in the memoranda of agreement, shall provide technical assistance in preparing permit applications and local comprehensive plan amendments for counties having a population of less than 75,000 residents, or counties having fewer than 100,000 residents which are contiguous to counties having fewer than 75,000 residents. Additional assistance may include, but not be limited to, guidance in land development regulations and permitting processes, working cooperatively with state, regional, and local entities to identify areas within these counties which may be suitable or adaptable for preclearance review of specified types of land uses and other activities requiring permits.

(19) The following projects are ineligible for review under this part:

(a) A project funded and operated by a local government, as defined in s. [377.709](#), and located within that government's jurisdiction.

(b) A project, the primary purpose of which is to:

1. Effect the final disposal of solid waste, biomedical waste, or hazardous waste in this state.
2. Produce electrical power, unless the production of electricity is incidental and not the primary function of the project.
3. Extract natural resources.
4. Produce oil.
5. Construct, maintain, or operate an oil, petroleum, natural gas, or sewage pipeline.

Recycle Florida Today Feedback on the Preliminary Recommendations for Achieving Florida's 75% Recycling Goal
(Prepared By Florida Department of Environmental Protection Division of Waste Management, Draft June 21, 2009)

Submitted on: August 28, 2009

INTRODUCTION:

Recycle Florida Today is a diverse organization dedicated to supporting and fostering recycling efforts and sustainability programs in Florida and as such, brings together many interests including the public and private sectors. On behalf of our membership, the Board of Directors (a full listing of our Board can be found here: www.recyclefloridatoday.org/rft-board.cfm) has reviewed your draft recommendations and has provided consensus opinion, where possible. In some cases, we were not able to reach consensus due to the diverse makeup of our Board and membership, and have so noted that in the following document. Additionally, in some cases, we did reach a consensus but did not have unanimous agreement and have also noted any dissenting opinions and votes for the public record where applicable.

Overall, we energetically support the goal of 75% recycling by 2020. However, very dramatic and aggressive changes are necessary for the state to reach a 75% goal, or quite frankly, anything even near 75%. Recommendations must go beyond the page and provide communities and other stakeholders with the *REAL* resources and support they need to develop, implement and evaluate programs. We also question the ability for this goal to be adequately measured, and therefore truly upheld.

In addition to some specific feedback provided below as it relates to specific recommendations in the plan, below are some additional thoughts and comments from RFT:

- There are many states and local governments that are enacting real change, that include San Francisco, Georgia, California, North Carolina, and others. **This is not an endorsement of any of the examples listed below. It is a suggestion which may worth a more thorough examination of what other successful programs are doing that is "outside the box."** Here are just a few:
- San Francisco recently made the decision to levy fines of up to \$1,000 on those unwilling to sort recyclables. Read more here: <http://www.nytimes.com/2009/06/11/us/11recycle.html?fta=y>.
- The state of Georgia has set ambitious goals for recycling and solid waste diversion. They have engaged stakeholders in developing their goals, have fostered market development, have planned and launched an education campaign – but most of all, they have plans in place to MEASURE success. Check out more here: <http://www.georgiaenr.com/repository/Topic%2013%20-%20Conserve%20Georgia.pdf>
- North Carolina has mandatory recycling of beverage containers for alcohol and food service establishments and California is implementing mandatory commercial recycling statewide and

appears to have a good approach that FL may want to model:

<http://www.ciwmb.ca.gov/climate/Recycling/default.htm>

- Rhode Island, Connecticut and several other states require that K-12 schools establish in school recycling programs.
- Pennsylvania, New Jersey and several other states have mandatory curbside recycling requirements.

RFT INPUT ON SPECIFIC GOALS FOLLOWS:

Section A: Programs to identify environmentally preferable purchasing practices to encourage the purchase of recycled, durable, and less toxic goods.

RFT Comments: We support this recommendation; however feel that is very weak in its current form. We hope the DEP will consider having alternative language from another state and establishing stronger guidelines for purchasing.

Some good examples include: The States of California and Washington.

Section B: Programs to educate students in grades K-12 in the benefits of, and proper techniques for, recycling.

RFT Comments: Since Schools receive a large amount of State funds and are similar to the commercial sector, mandatory recycling should be required. We feel children will learn from actually recycling at their schools and not just education. We feel this requirement can be provided with a significant implementation time within the 2020 mandate so that recycling can be integrated into their solid waste collection contracts without a significant impact on the School Systems.

The link here takes you to an example of such a program that is the kind needed in Florida cities to help reach a 75% recycling rate: http://paperrecycles.org/case_study/wake_county.html. This program combines recycling in schools with environmental education and is integrated system wide but has a lot of flexibility and opportunities for individual schools to become creative and to use teacher and school club resources as well as janitorial help. There is one contractor that collects from all of the schools.

Section C: Programs for statewide recognition of successful recycling efforts by schools, businesses, public groups, and private citizens.

RFT Comments: We support this recommendation and thank FDEP for your recognition of the work RFT does in this arena to support and recognize programs and successes.

We look forward to working with FDEP and the legislature to perhaps extend our recognition efforts even further. With your help and support we, and others like us, can do even more to reward and incentivize communities, organizations and stakeholders for their efforts.

Section D: Programs for municipalities and counties to develop and implement efficient recycling efforts to return valuable materials to productive use, conserve energy, and protect natural resources.

RFT Comments:

Sub-recommendation 1: The Legislature should specifically apply the new recycling goal to all counties over 100,000 population and all cities over 50,000 population. Those local governments who do not make a good faith effort to achieve the goal should be ineligible for receiving grants from DEP.

RFT Comments: If goals are applied to counties and cities, then funding needs to be provided or it will be an unfunded mandate and will likely fail. In addition to funding, training and technical assistance should be included as well.

Sub-recommendation 2: The Legislature should specify that local governments under the population thresholds above will not be held to the goal, but shall at least provide the opportunity to recycle to their residents.

RFT Comments: We support

Sub-recommendation 3: The Legislature should promote the adoption of PAYT by creating a grant program to assist local governments in the design and startup costs of implementing PAYT.

RFT Comments: We support

Sub-recommendation 4: The Legislature should direct DEP to review in five years the number of local governments who have implemented PAYT and advise the Legislature as to whether additional measures should be taken to increase the adoption of PAYT.

RFT Comments: We support

Sub-recommendation 5: The Legislature should require that all C&D be processed at a materials recovery facility prior to disposal.

RFT Comments: Overall we support but this needs to be worded differently. Some single streams of C&D materials can be recycled without being sent to a MRF; i.e. wood waste, asphalt, concrete, etc. Need to establish Best Management Practice for C&D recycling and have that as a requirement to be followed.

Sub-recommendation 6: The Legislature should require commercial recycling in counties over 100,000 population and cities over 50,000 population. The Legislature should also provide grants to local governments to help implement this requirement For purposes of this recommendation,

utilize the traditional waste collection business definition of commercial, meaning that multi-family residential units (apartments, condominiums, etc.) are included in the sector.

RFT Comments: We support

Sub-recommendation 7: The Legislature may wish to consider a phased approach to requiring commercial recycling, focusing first on office buildings and retail establishments, second on multi-family residential units.

RFT Comments: We support

Section E: Programs by which the department can provide technical assistance to municipalities and counties in support of their recycling efforts.

RFT Comments: We support both fund allocation for detailed technical training for recycling coordinators and solid waste staff of local governments and the creation of a Recycling Business Assistance Center. However, we recommend FDEP and the legislature also provide resources, funding and other support for state and local organizations to also address these needs, such as Recycle Florida Today, SWANA and others.

Section F: Programs to educate and train the public in proper recycling efforts.

RFT Comments: We support the development of education programs and tools. However, the state should implement a statewide program that provides tools and materials for the counties to use so they don't have to spend time or money creating this on their own. States that have successfully implemented campaigns with tools for community include Minnesota, North Carolina, Georgia and Pennsylvania.

Section G: Evaluation of how financial assistance can best be provided to municipalities and counties in support of their recycling efforts

RFT Comments: Since we have such a diverse membership we were unable to reach consensus on the various funding proposals. We do not support unfunded mandates; therefore there must be a realistic funding stream to support efforts behind the goal. We suggest FDEP look at previously used funding sources; % of sales tax and tire disposal fee.

Section H: Evaluation of why existing waste management and recycling programs in the state have not been better used

RFT Comments: No recommendations to comment on. We generally agree with the statements.

ADDITIONAL RECOMMENDATIONS AND RFT COMMENTS

Organics Recycling:

RFT Comments: The RFT Board is supportive of most of the recommendations with the exception of the FDEP recommendations related to retaining the landfill ban on yard trash – we do not support allowing yard trash to go into lined landfills regardless of whether they have gas collection systems. It is even worse if yard trash goes into the landfills without such systems. This is not the most efficient manner to maximize beneficial use of organics and the reduction of greenhouse gases.

(Note: For the record, two RFT Board members voted against this position, they are: Larry Dalla Betta, Waste Management, Steve Lengefeld, SP Recycling Corp.)

Recycling/waste reduction in state agencies/universities

RFT Comments: Too weak - Need to mandate that recycling programs are implemented in these agencies and institutions.

Market Development

RFT Comments: We support. A plan of action needs to be developed in addition to establishing a recycling market development center.

Product Stewardship

RFT Comments: We support. Product stewardship practices must be applied as a means of developing and funding waste reduction and recycling infrastructure. One of the most notable such programs in North America is the electronics recycling program recently established in Ontario. Below is an article that describes this program fully funded by the private sector.

<http://www.durhamenvironmentwatch.org/Media08/0603Electronic%20waste%20diversion%20vital%20next%20step.pdf>. It will only be through the use of such extraordinary programs that Florida will be able to achieve a 75% recycling rate.

(Note: For the record, one RFT Board member, Larry Dalla Betta, Waste Management abstained from voting and one voted against supporting this position, Steve Lengefeld, SP Recycling Corp.)

Greenhouse Gas benefits of Recycling

RFT Comments: Need to document and support overall benefit of recycling in reducing greenhouse gases. Need more recommendations than just the landfill capture and use/flare recommendation to address this issue.

Subject: FW: Clerk of Circuit Court Employee Salary Increases
Importance: High
Attachments: 20090828140127.pdf

Gloria,

Mr. Lege indicated in his email today that this is an issue best reviewed and responded by you without his review of the same. I think my email comments are clear in regard to acknowledging your statutory authority; however, that same authority does not establish the understanding of the budget request/budget approval process between you and the BOCC. It is to that concern that this documentation is provided in the hope that a different and more positive conclusion can be drawn from the information in the memorandum. If there is, I would appreciate either sharing it with the BOCC on September 8, 2009 or being present to address the same with the BOCC at that meeting.

Importance: High

John,

Please review the memorandum attached with Gloria. I do not know how to further interpret the data than one of the two conclusions found in the memorandum. We all recognize the authority of the Clerk of Circuit Court to dispense raises in the manner she deems appropriate; however, either of the two conclusions results in a false commitment to the overall raises provided to employees between her office and the BOCC. If there is any other conclusion that can be drawn please let me know prior to Wednesday at noon since I will have it under my reports to the BOCC for the September 8, 2009 meeting and would welcome something more positive.

Memo

To: Bradley Arnold
From: Sandra Howell
Date: August 27, 2009
RE: Salary Increases – Clerk of Circuit Court

It has come to my attention employee increases were given to Clerk of Circuit Court employees in August 2009. The disability billing is based on salary and confirmation has been made through reflection of salary changes on the September 2009 billing.

History - The Board approved employee increases for the FY 2008-09 in the amount of 2.3%. Annual increases for the Clerk of Circuit Court employees were given in October 2008 and reflected on the November 2008 disability billing ranging between 1% and 16%. Thirty-eight employees received less than 2.3%, six received 2.3%, and 15 received more than 2.3%. Overall, the November annual salaries were 2.77% more than October annual salaries on the disability billing.

The September 2009 disability billing shows additional increases. These increases range from an additional 0% increase to 15% increase. The annual salary total has decreased by 9% from the November billing due to lay-offs. The September 2009 increases were reflected in the budget request documents from the Clerk of Circuit Court for FY 2009-10 that were filed in May 2009 which demonstrates either:

Non-compliance with the 2.3% increase for FY 2008-09

or

An increase in FY 2008-09 to usurp the agreed upon 0% increase in FY 2009-10.

Report of Geotechnical Consulting Services - Forensic Study
Morse Boulevard at Lake Sumter Bridge
Villages of Sumter, Sumter County Florida

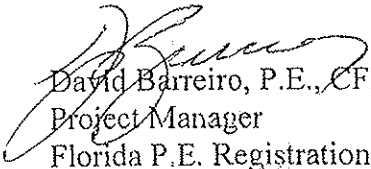

Dear Mr. Stevens:

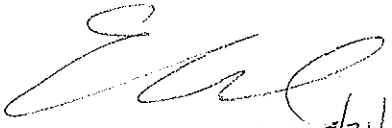

Nodarse & Associates, Inc. is pleased to present this Geotechnical Report addressing roadway embankment matters at the Morse Boulevard crossing of Lake Sumter in the Villages of Sumter, Sumter County, Florida. Our geotechnical engineering services were formally authorized via the Board of County Commissioners Purchase Order NO. 52841 dated June 11, 2009. Our services were performed in accordance with the N&A Proposal document dated June 10, 2009.

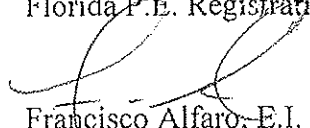

This Geotechnical Report summarizes the geotechnical findings and provides conclusions and recommendations regarding roadway embankment performance. We thank you for the opportunity to assist your office with project-related geotechnical matters. Please do not hesitate to contact our office with any questions concerning this Geotechnical Report.

Sincerely,

NODARSE & ASSOCIATES, INC.

EXECUTIVE SUMMARY

Nodarse & Associates, Inc. was commissioned for the engineering evaluation of geotechnical matters associated with the island embankment settlements, and for the determination of the most probable cause of roadway distress. Current site distress includes significant flexible pavement grade changes and pavement dips.

Construction of Morse Boulevard over Lake Sumter was completed circa 2003-2004. The roadway runs north-south and utilizes two multiple-culvert bridges and a man-made center island for the lake crossing. The portion of the roadway over the man-made island consists of a flexible asphaltic concrete pavement with total length of approximately 465 feet.

Pre-construction borings revealed the presence of very soft to soft peat/muck layers with thicknesses of up to 55 feet; zones of very soft to stiff fat and organic clays were also encountered at the site. Sands and limestone generally underlie the clay and organic zones.

Construction of the man-made island consisted of placement and compaction of granular fill soils following limited demucking operations. A total of 40 to 45 feet of granular fill soils were placed and compacted for island embankment construction. A limited surcharge program was completed with effective surcharge heights of 4 to 9 feet.

Present-day borings encountered organic clays, peat/muck and high plastic (fat) clays at various depths and with varying thicknesses beneath the island footprint. These are soils known for their potential for significant long-term settlements (occurring over many years) under applied loads.

Preload (surcharge) height and duration was inadequate for the intended purpose of significantly eliminating future consolidations settlements; vertical drains were not installed as part of the surcharge program. The reduced effectiveness of preloading organic soils was apparently not taken into consideration. On the order of 8 feet of embankment settlement has occurred over the last seven years; additional embankment settlements are anticipated to range from nominal to 3.5 feet over the next 10 to 15 years.

A roadway repair/rehabilitation option involves the reconstruction of the flexible pavement portion of Morse Boulevard following completion of a stone column installation program. A properly designed stone column installation program would be expected to result in approximately 80% to 90% reduction in the magnitudes of future settlements on this project.

Another option involves an upgraded roadway maintenance program for the flexible pavement portion of Morse Boulevard over Lake Sumter. This option would include annual elevation surveys followed by appropriate regrading/resurfacing of operations. Both options should be evaluated considering overall cost-effectiveness and disruptions to roadway operations.

1.0 INTRODUCTION

Nodarse & Associates, Inc. (N&A) has completed the forensic geotechnical engineering services for the subject project in Sumter County, Florida in general accordance with the contracted scope of work between the Board of Sumter County Commissioners, Road and Bridge Department and N&A.

The geotechnical exploration program summarized in this document was performed in accordance with generally accepted local soil and foundation geotechnical engineering practices. This Geotechnical Report presents the results of the geotechnical field exploration and laboratory testing programs, and discusses the apparent and anticipated roadway embankment performance from a geotechnical engineering point of view.

2.0 OBJECTIVE

N&A was commissioned for the engineering evaluation of geotechnical matters that may be associated with the current roadway island embankment movements, including immediate and long-term settlements behavior. Embedded in our work objective was the determination, to a reasonable degree of certainty, of the most probable cause or causes of the reported and observed distress in certain portions of the flexible roadway pavement. To satisfy the stated objective the following tasks were undertaken:

- Fact-finding site visits and observations of present-day conditions
- Review of (available) previous project-related documents/reports and pertinent published information
- Exploration of the prevailing subsurface soil conditions beneath the island roadway section and bridge deck sections
- Performance of a series of laboratory tests on selected subsurface soil specimens, recovered from the field exploration program, to assist with the engineering soil classifications and with the estimation of relevant soil engineering properties
- Evaluation of the subsurface soil response to anticipated embankment loadings
- Compilation and evaluation of all the gathered information to form the basis for engineering conclusions as to the cause(s) of the distress
- Technical discussion and recommendation of remediation/stabilization protocols that may be appropriate in light of the cause, extent of damage and desired future embankment performance

This geotechnical study is limited to performance matters associated with the man-made island and does not address bridge deck or keystone wall performance.

3.0 PRESENT DAY CONDITIONS

Current site distress includes flexible pavement roadway grade changes and pavement dips. Roadway grade changes are most noticeable near bridge deck and island flexible pavement joints, on the asphaltic concrete side of the interface. Observed distress may be related to roadway embankment/island settlement and may be an active condition.

4.0 AVAILABLE PROJECT DOCUMENTS

Documents available for our review during the preparation of this Geotechnical Report included the following:

- Geotechnical Engineering Study, Morse Boulevard and The Villages Town Center – Earthwork Recommendations, prepared by Andreyev Engineering Inc. dated December 18, 2001.
- Geotechnical Engineering Study, Morse Boulevard over Lake Sumter, prepared by Andreyev Engineering Inc. dated February 15, 2002.
- Results of Additional Borings, Morse Boulevard over Lake Sumter, prepared by Andreyev Engineering Inc. dated October 9, 2002.
- As-built Drawings prepared by Farner, Barley and Associates, Inc. dated December 20, 2004 and consisting of sheets 10 through 16 of 33 and sheet 29 of 33, including Master Plans and Plan & Profile sheets.
- Andreyev Engineering Inc. letter titled Pavement Section Design dated August 13, 2002.
- Andreyev Engineering Inc. letter titled Site Earthwork Observations and Testing dated August 14, 2002.
- Andreyev Engineering Inc. letter titled Site Earthwork Testing with attachments dated August 20, 2002.
- Andreyev Engineering Inc. letter titled Sieve Analysis Testing, Town Center Borrow, Proposed Culvert Backfill, dated August 27, 2002.
- Summary of Settlement Plate Data at the Island on Lake Sumter prepared by Specialized Services, Inc. dated October 7, 2002.
- In-Place Field Density Test Reports prepared by Andreyev Engineering during various stages of fill placement and compaction work during the period from late 2002 to early 2003.
- Summary of data and recommendations, Morse Boulevard Settlement Data, prepared by Andreyev Engineering Inc. dated March 6, 2003.

5.0 UNDERSTANDING OF THE PROJECT

Construction of Morse Boulevard over Lake Sumter was completed circa 2003-2004. The roadway runs north-south and utilizes two multiple-culvert bridges and a man-made center island for the lake crossing. The project was built for The Villages and subsequently dedicated to Sumter County in 2008.

The original roadway project consisted of the construction of Morse Boulevard over Lake Sumter approximately ¼ mile south of County Road 466 in Sumter County, Florida. The overall project length was approximately 1,500 feet, consisting of culvert bridges to the south and north of an island that was to be constructed near the center of Lake Sumter.

The north bridge has a length of approximately 609 feet and consists of six culverts (corrugated steel SUPER-SPAN horizontal ellipses) designed to bear directly on prepared granular soils, and with concrete bridge deck elevations ranging from about +58 to +64 feet NGVD with an upward gradient towards the island.

The south bridge has a length of approximately 490 feet and consists of four culverts designed to bear directly on prepared granular soils, and with concrete bridge deck elevations ranging from about +56 to +67 feet NGVD also with an upward gradient towards the island.

The portion of the roadway over the man-made island consists of a flexible asphaltic concrete pavement with total length of approximately 465 feet. The pavement was designed with the following finished grades: north end starts at approximately +64 feet NGVD and proceeds approximately 318 feet towards the south with an 2.4% up gradient to a high point elevation of approximately +69 feet NGVD, with the balance of the pavement running south with a downward gradient to meet the south bridge deck at approximately elevation +67.5 feet NGVD.

Construction of the man-made island consisted of placement and compaction of granular fill soils. Records of field density testing provided to our office suggest controlled fill placement operations may have started at elevation +33 feet NGVD. Demucking operations may have been extended to approximately elevation +27 feet NGVD. Preconstruction normal lake water levels may have been at +48 feet NGVD. The preconstruction bottom of lake elevation was estimated at +35 feet NGVD. Embankment slopes were constructed with 3:1 (H:V) above the normal waterline; somewhat flatter slopes are assumed below the water line.

The following embankment condition are estimated:

Total height of island embankment fill	=	40 to 45 feet
Plan dimensions of embankment at road elevation	=	50 by 465 feet (approximate)
Plan dimensions of embankment at water line	=	170 by 585 feet (approximate)
Plan dimensions of embankment at mud line	=	270 by 700 feet (approximate)

6.0 PRECONSTRUCTION SUBSURFACE CONDITIONS

A temporary dike was built to provide access to Andreyev Engineering drilling equipment along the proposed roadway alignment. Fourteen SPT borings were extended to depth of 50 to 100 feet below the top of dike elevation of +40 feet NGVD. The footprint of the man-made island was explored with six of the borings. Borings were drilled in early 2002.

All six borings within the man-made island footprint encountered zones of peat/muck with thicknesses varying from 5 to 55 feet. Zones of sandy clay and fat clay were also encountered in the subsurface profile. The top of the peat/muck zone was found at elevations of +27, +31 and +22 feet NGVD. N-values characterize the peat/muck soils as very soft to soft; clays are characterized as very soft to stiff.

The top of the limestone stratum was only encountered in two borings, away from the island footprint area, at elevations of -12 and -23 feet NGVD. Groundwater elevations at the boring sites are indicated below +30 feet NGVD.

Other geotechnical exploration performed for the subject project identified the presence of laterally discontinuous fat clays, throughout the project areas, at varying depths below ground surface and with varying stratum thicknesses.

7.0 CONSTRUCTION ACTIVITIES

It is our understanding that an undercutting program, beneath the island footprint, was completed prior to embankment fill placement activities; however our office was not provided any field records or certification documents regarding such activities. A clue as to the extent of demucking activities on the Morse Boulevard project is found in the Andreyev Engineering Inc. letter dated August 14, 2002 which discusses “demucking operations to the north and south of the proposed island”. Also, confirmatory SPT borings were extended to an elevation of +24 feet NGVD, suggestive of the limits of demucking operations in those project areas.

It is also our understanding that a surcharge program was completed within the plan limits of the island, as suggested by Andreyev Engineering Inc. in their geotechnical report dated February 15, 2002. The Andreyev document discusses a “surcharge height on the order of 20 to 30 feet”. However documents provided to our office, as listed above, indicate the following:

<u>Island Location</u>	<u>Finished Pavement Elev.</u>	<u>Embankment Fill Elev.</u>	<u>“Surcharge” Fill Elev.</u>	<u>Actual Height of “Surcharge”</u>
North end	+64 feet (approx.)	+63 feet (approx.)	+72 feet	9 feet
Central	+69 feet (approx.)	+68 feet (approx.)	+72 feet	4 feet
South end	+68 feet (approx.)	+67 feet (approx.)	+72 feet	5 feet

8.0 GEOLOGIC SETTING

The general geology of Sumter County is characterized by 200 to 300 feet of quartz sand, clay, peat, limestone and dolomite ranging from Middle Eocene age to Holocene age (the last 10,000 years). The Avon Park Limestone is present in the subsurface throughout Sumter County but does not outcrop in the county, and is of Middle Eocene age (40 to 45 million years ago). The upper 30 to 70 feet of the formation consists of limestone, and may be anticipated at depths of over 100 feet in the general area of the project site.

The Ocala Group overlies the Avon Park Limestone and may be found at depths of 25 feet and deeper in the general project area. The Ocala Group consists of limestone, dolomite and coquina. The undifferentiated surficial sediments throughout most of Sumter County consist of quartz sand, clayey sand and clay. The sediments range in thickness from a few feet to almost 100 feet, with a thickness of about 25 feet anticipated in the general area of the project site.

9.0 HYDROLOGIC SETTING

The Floridan Aquifer in Sumter County is comprised of rocks of the Ocala Group and Avon Park Formation and is the primary source of potable water within the county. The top of the mostly unconfined Floridan Aquifer system is less than 50 feet below the land surface over most of the county.

Intermediate confining units are absent or inefficient throughout the county, and where present are composed of clay and clayey sand. Sediments of the Hawthorn Group, often acting as the confining unit between aquifers in many regions of Florida, have been identified in the northeast corner of the county and are considered to be isolated remnants of the group. The surficial aquifer in Sumter County is comprised primarily of undifferentiated surficial sands and clayey sands. Thickness of the surficial aquifer system ranges from zero to approximately 60 feet.

The direction of shallow groundwater flow is generally towards surface water bodies. Recent Potentiometric Surface Maps of the Upper Floridan Aquifer suggests groundwater elevations, outside perched groundwater zones, might be expected on the order of +45 feet NGVD in the general area of the project site, or elevations similar to the lake water levels.

10.0 KARST TOPOGRAPHY

Topographic features of the project site and vicinity were reviewed on the Lady Lake, FL USGS Quadrangle Map. The topography of North Central Florida is characteristic of karst terrain, with sinkholes caused by natural climatic variability, as well as man-made activities, such as, the drop in groundwater levels from well pumping. The technical literature has characterized the majority of Sumter County with “bare or thinly covered limestone” in which sinkholes are “few, generally broad and shallow and develop gradually”.

The USGS sheet shows numerous sinkhole lakes of various sizes in this area of the County. Cherry Lake, aka Lake Sumter, together with adjacent Black Lake and Lake Miona are a product of the karst geology and are considered relic sinkholes; ancient sinkholes that are no longer active.

The technical literature suggests that most sinkholes in Sumter County are a result of dissolution of the limestone and are evidenced by a gradual lowering of the limestone surface and subsidence of the overlying soils. This type of sinkhole development results in shallow bowl-shaped depressions and a general rolling topography.

11.0 RECENT SITE OBSERVATIONS

The project site was visited by N&A geotechnical engineering personnel on several occasions. Our observations are summarized below and depicted in the appended photographic records. It is our understanding that performance issues with the roadway were first noticed circa 2007.

The most obvious conditions of distress are transverse cracks and depressions (dips) of the asphaltic concrete surface, and failure of concrete curbs and flatwork within the island limits. Some of the concrete elements have been replaced or repaired. Apparent settlement of the subgrade has impacted flexible pavement grades resulting in stormwater runoff issues between curb lines. Areas of erosion or failure of island embankments away from the roadway pavement areas was noted.

12.0 FORENSIC GEOTECHNICAL STUDY FINDINGS

Nodarse & Associates performed an additional six (6) soil test borings at the locations indicated below. This work was started on June 22, 2009 and completed on June 26, 2009.

12.1 Soil Test Boring Locations

<u>Soil Test Boring</u>	<u>Location</u>	<u>Roadway Station</u>	<u>Comment</u>
B-1	South bridge	42+25	outside southbound lane
B-2	Island	39+15	outside southbound lane
B-3	Island	37+37	outside northbound lane
B-4	Island	36+38	outside southbound lane
B-5	Island	34+56	outside northbound lane
B-6	North bridge	31+46	outside northbound lane

All boreholes were backfilled upon field work completion; the boreholes were cement grouted to grade whenever a cemented (limestone) formation was penetrated.

The two soil test borings located on the bridges were advanced to depths of 50 feet below the concrete decks. The four borings located on the island were advanced to depths of 100 feet below the asphaltic concrete surface. Soil test boring locations were selected by the N&A geotechnical engineer personnel; the goal was to collect representative and statistically significant project subsurface data.

Actual soil test boring locations were marked in the field by N&A engineering personnel. Recent surveyed elevations of the site grades at the soil test boring locations were not available for the preparation of this Geotechnical Report; the most recent survey data dates back to 11/2007.

12.2 Standard Penetration Test Borings

The standard penetration test (SPT) protocol was used to advance the borings and collect soil samples at the test sites. The standard penetration tests were performed in accordance with ASTM Procedure D-1586, Penetration Test and Split-Barrel Sampling of Soils. In addition, continuous sampling was performed within the upper 10 feet of the subsurface profile at each soil test boring location.

The standard penetration test was used to evaluate in-place cohesionless (sand) soil relative density, cohesive (clay) consistency, and soil strength. Penetration tests were performed in accordance with ASTM Procedure D-1586, Penetration Test and Split-Barrel Sampling of Soils. This test procedure generally involves driving a 1.4-inch I.D. split-tube sampler into the soil profile in six inch increments for a distance of 18 inches using a 140-pound hammer, free-falling 30 inches.

The total number of blows required to drive the sampler the second and third 6-inch increments is referred to as the "N-value". "N-values" have been empirically correlated with various in-place soil properties. The "N-values" at corresponding depths are shown in the appended Records of Test Borings.

Representative portions of the soil samples recovered were transported to our Gainesville geotechnical laboratory facility. The soil samples were visually classified and stratified by an experienced Geotechnical Engineer. The results of the classification and stratification are shown on the appended Records of Test Borings and summarized below. Soil samples will be available for inspection for a period of 3 months, at which time they will be discarded.

12.3 Shelby Tube Sampling

The Thin Wall Sampler or "Shelby" Tube Sampler is designed to take undisturbed samples in cohesive and organic soils. The thin-walled sampler minimizes the most serious sources of disturbance: displacement and friction. The procedure for taking samples is presented under ASTM Standard Procedures ASTM D 1587-83, "Standard Practice for Thin-Walled Tube Sampling of Soils, whereby the sampler is pressed into the undisturbed clays by hydraulic force. Three-inch diameter and 30-inch long tube, galvanized steel samplers were used on this project.

Undisturbed peat/muck samples were retrieved from in-situ zones characterized with relatively low N-values, or generally classified in the consistency range of very soft to soft. Recovered samples were sealed in the tubes and transported to our geotechnical laboratory facility for sample extraction and testing, if necessary. The test locations and depths from which undisturbed thin-walled soil samples were recovered are shown on the appended Records of Test Borings. If initially not selected for testing, these samples will be kept in storage for a minimum period of 6 months.

13.0 LABORATORY SOIL TESTING PROGRAM

The quantity and type of laboratory tests performed for this geotechnical study were determined and adjusted by N&A engineering personnel based on the uniformity and character of the subsurface soil conditions encountered, and our experience and knowledge of local soil conditions. Typically, soil specimens with medium to high apparent clay content were selected for verification of visual descriptions.

Laboratory soil tests are performed to aid in the classification of the soils, and to help in the evaluation of relevant engineering characteristics of the soils. Representative soil samples were selected for determination of percent fines, moisture content, organic content and Atterberg Limits. Test results are summarized in **Table 1** on the next page.

14.0 SUBSURFACE FINDINGS

The soil test boring data reflects subsurface conditions at the specific soil test boring locations only. Variations in subsurface soil conditions between soil test boring locations may occur from those shown on the appended documents, particularly within the in-situ (natural) soils rather than the man-placed fill soils.

While establishment of the generalized subsurface conditions on a project site is useful for the geotechnical engineering evaluation process, Records of Test Borings should be reviewed with caution as they promote extrapolation of recovered data between soil test boring locations. For the intended objective of this geotechnical study it was deemed more appropriate to avoid generalizing the subsurface conditions, but instead consider the specific findings at each soil test boring site.

While the attached Records of Test Borings should be reviewed for the detailed findings at each soil test boring site, the summary below is provided for reference purposes. Soil classifications and descriptions for this geotechnical study are based both on the results of soil laboratory tests and visual examinations of soil specimens by the experienced Senior Geotechnical Engineer. Recovered samples were not examined, either visually or analytically, for chemical composition or environmental hazards.

Boring	Depth	Percent Fines	Plasticity Index	Organic Content	Moisture Content	Soil Description
B-1	4 to 6	27	---	---	4	Clayey Sand (SC)
B-1	23.5 to 25	13	---	---	15	Slightly Clayey Sand (SP-SC)
B-1	43.5 to 45	29	10	---	16	Clayey Sand (SC)
B-2	4 to 6	18	---	---	4	Clayey Sand (SC)
B-2	8 to 10	25	6	---	12	Clayey Sand (SC)
B-2	18.5 to 20	28	9	---	16	Clayey Sand (SC)
B-2	28.5 to 30	32	10	---	20	Very Clayey Sand (SC)
B-2	38.5 to 40	71	46	---	40	Fat Clay (CH)
B-2	43.5 to 45	77	50	11	44	Organic Clay (CH, OH)
B-2	48.5 to 50	93	65	16	70	Organic Clay (CH, OH)
B-2	53.5 to 55	87	7	65	89	Organic Clay/Muck (OH,PT)

B-6	23.5 to 25	9	---	---	13	Sand (SP)
B-6	33.5 to 35	25	7	---	14	Clayey Sand (SC)
B-6	38.5 to 40	29	---	---	16	Clayey Sand (SC)

Table 1 - Laboratory Soil Test Results

14.1 Island Pavement Borings

Four soil test borings (B-2, B-3, B-4 and B-5) were performed through the flexible roadway pavement sections within the limits of the island.

<u>Boring</u>	<u>Depth BLS</u>	<u>Description</u>	<u>Long-Term Settlement</u>
B-2	0 to 8 feet	Medium slightly clayey Sand (SP-SC)	No
	8 to 17 feet	Loose clayey Sand (SC)	Little to none
	17 to 40 feet	Medium clayey Sand (SC)	Little to none
	40 to 54 feet	Medium organic Clay (OH)	Yes
	54 to 74 feet	Stiff organic Clay/Muck (OH/PT)	Yes
	74 to 84 feet	Medium Sand (SP)	No
	84 to 100 feet	Weakly to Well-cemented Limestone	No

Groundwater level recorded in borehole approximately 18 feet below site grade.
100% loss of drilling fluid circulation at depth of 75 feet.

B-3	0 to 14 feet	Med/dense slightly clayey Sand (SP-SC)	No
	14 to 48 feet	Medium clayey Sand (SC)	Little to none
	48 to 54 feet	Medium organic Clay (OH)	Yes
	54 to 64 feet	Stiff organic Clay/Muck (OH/PT)	Yes
	64 to 78 feet	Medium clayey Sand (SC)	Little to none
	78 to 94 feet	Soft to medium Clay (CH)	Yes
	94 to 100 feet	Well-cemented Limestone	No

Groundwater level recorded in borehole approximately 16 feet below site grade.
100% loss of drilling fluid circulation at depth of 93 feet.

B-4	0 to 14 feet	Medium slightly clayey Sand (SP-SC)	No
	14 to 18 feet	Stiff Clay (CH)	Yes
	18 to 44 feet	Medium clayey Sand (SC)	Little to none
	44 to 60 feet	Dense slightly clayey Sand (SP-SC)	No
	60 to 80 feet	Medium clayey Sand (SC)	Little to none
	80 to 85 feet	Well-cemented Limestone	No

Groundwater level not apparent in open borehole in upper 10 feet.
100% loss of drilling fluid circulation at depth of 78 feet.

<u>Boring</u>	<u>Depth BLS</u>	<u>Description</u>	<u>Long-Term Settlement</u>
B-5	0 to 18 feet	Med/dense slightly clayey Sand (SP-SC)	No
	18 to 24 feet	Medium clayey Sand (SC)	Little to none
	24 to 38 feet	Dense slightly clayey Sand (SP-SC)	No
	38 to 58 feet	Medium clayey Sand (SC)	Little to none
	58 to 64 feet	Stiff sandy Clay (CL)	Yes
	64 to 74 feet	Medium clayey Sand (SC)	Little to none
	74 to 84 feet	Very soft Clay (CH)	Yes
	84 to 98 feet	Medium Clay (CH)	Yes
	98 to 100 feet	Weakly-cemented Limestone	No
Groundwater level not apparent in open borehole in upper 10 feet.			
100% loss of drilling fluid circulation at depth of 85 feet.			

14.2 Bridge Deck Borings

Two soil test borings (B-1 and B-6) were performed through the north and south bridge concrete decks.

<u>Boring</u>	<u>Depth BLS</u>	<u>Description</u>	<u>Long-Term Settlement</u>
B-1 (south)	0 to 10 feet	Dense Sand (SP)	No
	10 to 44 feet	Dense slightly clayey Sand (SP-SC)	No
	44 to 48 feet	Medium clayey Sand (SC)	Little to none
	48 to 50 feet	Stiff sandy Clay (CL)	Yes
Groundwater level recorded in borehole approximately 15 feet below site grade.			
No loss of drilling fluid circulation.			
B-6 (north)	0 to 15 feet	Loose Sand (SP)	No
	15 to 28 feet	Medium to dense Sand (SP)	No
	28 to 34 feet	Well-cemented Limestone	No
	34 to 50 feet	Loose to medium clayey Sand (SC)	Little to none
Groundwater level recorded in borehole approximately 15 feet below site grade.			
Partial loss of drilling fluid circulation at depth of 30 feet.			

15.0 EMBANKMENT PERFORMANCE

The following brief technical discussion addresses the soil mechanics concepts of settlement as these may apply to and have an impact on the island embankment performance on this project. Both high plastic clays and organic soils are found in the subsurface profile beneath the island embankment.

15.1 Consolidation Settlement

Consolidation is a process by which a soil mass decreases in volume. It occurs when stress is applied to the soil mass causing the soil particles to pack together more tightly; if the soil mass is saturated the water will be squeezed out of the soil with time.

When stress is removed from a consolidated soil, the soil will rebound, regaining some of the volume it had lost in the consolidation process. If the stress is reapplied, the soil will consolidate again along a recompression curve. The soil which had its load removed is considered to be overconsolidated. This is the case for soils which have previously had a surcharge on them. The highest stress that it has been subjected to is termed the preconsolidation stress. A soil which is currently experiencing its highest stress is said to be normally consolidated.

The prevailing cohesive and organic soils on this project site may be considered to be slightly overconsolidated as a result of project surcharge activities. The significance of this on this project is that, up to a point, less settlement under load is typically expected from an overconsolidated soil versus a normally consolidated soil.

15.1.2 Clay Soils

In general, consolidation of a cohesive (clay) mass begins rapidly and becomes slower with increasing time. It can be divided into three stages: initial, primary and secondary. Primary and secondary stages are known as long-term settlement stages. The initial stage occurs soon after the load is applied. The initial and primary stages are often not differentiated and are jointly referred to as primary consolidation.

On a typical project scenario “initial” settlements from underlying cohesive soils occur under applied embankment loads shortly after those loads are in place. The time period for this initial settlement to occur varies depending on the character of the underlying bearing soils and other factors, but it is generally anticipated to be on the order of days rather than months following load application.

In general, under both technically sound geotechnical design conditions and appropriate geotechnical site preparation protocols, the magnitudes of initial settlements typically fall within tolerable limits and do not compromise the structural integrity of the super structures, pavements or other project elements.

The cohesive soils are associated with continuing vertical deflections (consolidation) under the same applied foundation loads following the initial period. The primary stage of consolidation may have significant magnitudes of vertical deflections associated with it, directly impacting embankment performance, and depending on a number of factors may be expected to continue for months and years.

The following factors on this project site all pose the potential for differences in embankment performance at different locations beneath the island footprint:

- variations in clay/organic soil strata thicknesses
- variations in engineering properties of the strata with varying depth below ground surface
- lateral discontinuity of the soil strata
- varying depths to the strata below the embankment bearing elevations
- presence of sands seams in the subsoil profile
- variations in applied embankment contact pressures

Given sufficient time, the clay soils have the potential to reach a stable condition following the completion of all significant long-term consolidation under current applied embankment loads.

15.1.3 Organic (Peat) Soils

Peat soil is described as a naturally occurring highly organic substance derived primarily from plant materials. It is formed when organic (usually plant) matter accumulates more quickly than it decays.

For evaluation purposes an organic soil mass is considered to exhibit similar consolidation settlement behavior as a clay soil mass, as described above. Primary consolidation of organic soil deposits is completed in weeks or months in typical field situations. Secondary compression is important in peat deposits because these soils exist at high void ratios and exhibit high values of compression index. The secondary stage may be significant in highly organic and highly sensitive soils and may continue for years.

The technical literature may be reviewed for various construction techniques that have been carried out to support embankments over peat deposits without risking bearing failures, but settlement of these embankments remains excessively large and continues for many years.

15.2 Elastic Settlement

Elastic or immediate settlements of the underlying natural granular (sand, slightly clayey sand and clayey sand) soils, under applied embankment loads, are anticipated to have occurred during site geotechnical preparation activities, and simultaneous with and shortly after embankment dead load application.

15.3 Consolidation Settlement Estimates

The consolidation equation used to predict long-term consolidation behavior of cohesive and organic soils is complex. Variables included in the equation and having an impact in the prediction of long-term settlements include:

- original void ratio of the soil mass
- total thickness of stratum
- effective overburden pressure
- preconsolidation pressure
- final pressure due to applied loads in addition to overburden pressure
- slope of the average rebound-recompression line
- slope of the virgin compression portion of the e-log p curve

Long-term settlement may be estimated on a given project by considering estimated values for some of the variables in the consolidation equation. Slight variations in most of the variables are not associated with significant differences in the magnitudes of predicted long-term consolidation. By far the variable with the most significance is the thickness of the stratum, more specifically the thickness of the stratum that lies within the zone of significant stress influence from the embankment loads.

The depth of significant stress influence is defined as that zone below the embankment bearing elevation where applied surface/structural loads will result in sufficient vertical stress increase in the soil mass to cause settlement or consolidation of the underlying soil mass. The geotechnical literature present methods for estimating vertical stress increases in the soil mass beneath embankments. Considering the conditions on this project, it would be anticipated that construction of the island embankment would have a significant effect over the entire thickness of underlying clay and organic soil zones.

15.4 Preloading (surcharging)

One of the methods available for deep-soil geotechnical site improvement is preloading or surcharging. Preloading involves placement of a surcharge fill on top of the soil mass that requires consolidation. Once sufficient consolidation has taken place the fill is removed. Surcharge fill heights are typically 10 to 25 feet but can be greater. To be effective a preloading program must consider the lateral extent (footprint width and length) of the surcharge fill mass, and allow sufficient time for soil consolidation to occur.

Vertical drains are often installed under a surcharge load to accelerate the drainage of the soil and speed up the consolidation process. In practice the time required to drain clay layers can be reduced from many several years to a couple of months. Although preloading can reduce post-construction secondary settlements for both clay and peat deposits, it has been proven to be less effective for peats.

On the Morse Boulevard project the surcharge heights were in the range of 4 to 9 feet above the finished project grades, and two settlement plates were installed and monitored for 6 months. Measured settlements at the north and south plates were 32 and 50 inches, respectively. Vertical drains were not installed as part of the surcharge program.

15.5 Percentage of Consolidation

The time-rate of primary consolidation (estimated above) is controlled by the escape of water from the soil voids, and it can take years to occur. The percentage of the total consolidation that has already occurred in the underlying soil strata depends on a number of factors:

- Soil permeability, which governs the rate of flow of water
- Thickness of stratum, which influences both the volume of water that must seep out and the distance it must travel and the hydraulic gradient
- Number of pervious boundaries of the strata, which influences the distance the water must travel and the gradient
- Void ratio and rate of change of void with pressure, which influences both the volume of water and the pore pressure stress decrease with loss of water

The theoretical analysis of consolidation is based on a number of assumptions, including a homogeneous, saturated soil and vertical movement of the pore water, among others. Because of these assumptions great accuracy cannot be expected in estimates of the time rate of consolidation.

15.6 Embankment Settlement Estimates

Due to the variability in the subsurface profile as well as that of other relevant project variables, for ease of understanding, we present below “best case” and “worst case” scenarios for future settlements on this project. The “best case” scenario is generally representative of the north half of the island. The “worst case” scenario is generally representative of the south half of the island. However, again primarily as a result of the variability of the natural subsurface profile at depth, additional settlements or varying magnitudes should be expected throughout the entire embankment footprint.

North Half of Island (best case) = All settlements of practical significance, that is with potential to exceed the serviceability limits of the roadway, as defined by localized or general area pavement deformations, have already occurred; nominal additional settlements may be anticipated in the future.

South Half of Island (worst case) = On the order of 70% of the total anticipated embankment settlement has already occurred (years 2002 to 2009). The total anticipated project area settlement is 11.5 feet; it is estimated that on the order of 8 feet have occurred to date. The remaining settlements, on the order of 3.5 feet, are anticipated to occur over the next 10 to 15 years. The remaining settlements are expected to exceed the serviceability limits of the roadway, as defined by localized or general area pavement deformations.

16.0 CONCLUSIONS

Our engineering conclusions are based on the project information described in this geotechnical report, the available field and laboratory test data, our technical evaluation and our past project experience with geotechnical matters in the State of Florida.

Not enough time has elapsed since the initial placement of the embankment fill materials for all the secondary consolidation of the natural clay and organic lake bottom deposits to have occurred. As described above, a number of project-specific factors will likely result in future, non-uniform settlement of the embankment beneath the flexible roadway sections.

Relying on the subsurface findings and technical discussions summarized in this document, it is our professional opinion that two options may be considered on this project: roadway reconstruction and roadway rehabilitation.

16.1 Roadway Reconstruction

Consideration should be given to reconstruction of the flexible pavement portion of Morse Boulevard following completion of a deep soil improvement program to mitigate additional embankment (roadway) settlements. The vibro-replacement stone column process is considered a technically viable solution on this project. A properly designed stone column installation program would be expected to result in approximately 80% to 90% reduction in the magnitudes of future settlements on this project.

This option should be evaluated considering overall cost-effectiveness and the one-time disruption to normal roadway operations. We suggest the following roadway reconstruction program protocol be considered for this project:

- Install stone columns from current grades to depths of 75 feet below the AC pavement surface to provide an embankment load/stress transfer mechanism through the mid-depth clay and organic soil layers to the deeper sand bearing soils.
- Regrade to design elevation and rebuild the entire length of AC roadway.

Densification and/or reinforcement of the subsoils with compacted stone columns are accomplished by either the top-feed or the bottom-feed method. On this project the bottom-feed method would be considered most appropriate due to the presence of the weak compressible clays and peats; the bottom-feed method should result in compact and relatively “clean” stone columns. The bottom-feed method is also more desirable, considering maintenance of traffic during work operations, since it is less “messy” than using the top feed method (jetting water).

The bottom feed method feeds the stone backfill directly to the tip of the vibrator; it is a dry operation with minimal generation of spoil at the surface, with treatment possible up to a depth of 80 feet and is not inhibited by the presence of groundwater.

Implementation of the stone column solution would require:

- Engineering design process to establish embankment performance parameters, quality and quantity of aggregate, stone column size, and vibro-replacement scheme
- Quality control program to include real-time monitoring, and quality assurance program to include load test and post treatment test programs

Preliminarily for this project site it is anticipated that stone column installation would require approximately two working months to complete, that the work would be performed at night, and that a work program would be designed to always maintain two lanes of traffic open. To aid the decision making process, we preliminarily estimate the cost of the stone column installation program to be on the order of \$900,000.00 in addition to the costs associated with roadway area regrading and rebuilding.

16.2 Roadway Rehabilitation

Consideration should be given to an upgraded roadway maintenance program for the flexible pavement portion of Morse Boulevard over Lake Sumter. This option should be evaluated considering overall cost-effectiveness and the periodic disruptions to normal roadway operations over the life of the project. The following roadway maintenance program protocol may be considered for this project:

- Performance of annual roadway pavement elevation surveys with similar scopes of work as the survey previously performed by Farner Barley and Associates on November 13, 2007.
- Review of annual survey results by the geotechnical engineer for appropriate technical commentaries and engineering recommendations.
- Milling, resurfacing and regrading only those portions of the AC pavement judged to have exceeded the roadway serviceability limits.

We do not anticipate that milling, resurfacing and regrading activities will be required annually, however, we suggest that for maintenance program cost estimating/budgeting purposes annual events be considered as the worst case scenario, and extending over the next 15 years. We suggest cost information for these repair activities be obtained from an experienced general contractor, preferably one with working knowledge of the project site and related issues.

It is anticipated that significant embankment settlements will have ceased to occur prior to the 15-year mark; it is also anticipated that milling/resurfacing/regarding activities may only be warranted every third year or so.

Consideration should be given to initially reestablishing the original roadway design grades/elevations. It should be recognized that placement of additional granular fill soils and asphaltic concrete lifts over the project areas, for pavement section and right-of-way regrading purposes, will increase the applied embankment loads with a resulting net increase in the magnitudes of anticipated settlements over time. It is our professional opinion that nominal additional settlements would occur under this scenario.

It should also be recognized that existing concrete curbing and concrete flatwork within the limits of the island will require initial and/or periodic repairs or replacement. Future regrading plans should be designed to accommodate stormwater runoff issues in between anticipated regrading events.

Milling and resurfacing operations should conform to the most current Florida Department of Transportation Standard Specifications for Roadway and Bridge Construction. Construction traffic on milled surfaces should be limited until adequate structural depth is in place with resurfacing operations. Consideration should be given to the removal of the entire asphalt structure in those roadway areas exhibiting excessive or full depth cracking.

17.0 REPORT LIMITATIONS

This Geotechnical Report has been prepared for the exclusive use of the Board of Sumter County Commissioners, Sumter County Public Works and their consultants, for application to the specific project discussed herein. This Geotechnical Report has been prepared in accordance with generally accepted local geotechnical engineering practices; no other warranty is expressed or implied. N&A is not responsible for the independent conclusions, opinions or recommendations made by others based on the findings presented herein.

The conclusions and recommendations presented in this engineering report are based in part upon the data obtained from the geotechnical studies performed at the subject parcel, and are site-specific to the subject site and should not be considered pertinent or valid to other nearby or adjacent sites. The natural subsurface profile in the general project area may reflect variations from the findings at the soil test boring sites.

The Honorable Garry Breeden
Chairman
Sumter County Board of County Commissioners
910 North Main Street
Bushnell, FL 33513

Re: Regionalization of Solid Waste Disposal

Dear Mr. Breeden:

I am writing to extend an invitation to your County government to join in informal discussion panel meetings with representatives from Citrus, Hernando, Levy, Sumter, Marion and Lake Counties in order to explore the possibility of regionalization of our solid waste disposal needs. Disposal of solid waste is an important issue we all face and it is my hope that we can find ways to work together to satisfy these needs in the most economical and responsible manner possible.

I would request that initial meetings include you or your designee, the County Administrator and County Attorney with the intent of establishing base line goals. When specific goals have been identified, I would suggest expanding the group to include other members of County staff.

If your County would be interested in participating in meetings, please contact our Commission Services Coordinator, Nancy Neale at 352-341-6569 or via email at nancy.neale@bocc.citrus.fl.us and provide her with your availability.

Thank you for your consideration and I look forward to hearing from you.

Sincerely,

Gary Bartell
Commissioner, District 2

Cc: @County Commissioners; Kuhl, Gary; Wise, Jimmy
Subject: RE: Regionalization of Solid Waste Disposal

Nancy,

No the Sumter County BOCC has not discussed the opportunity or made any decision regarding the same. I am happy to have this item under my reports at the 9-8-09 meeting for any direction by the BOCC.

Please note that we have an active application for a Class I landfill in Sumter County that is proposed to be privately operated (ACMS) as well as 2 operating transfer stations (1 County operated and 1 privately operated).

Mr. Jimmy Wise does participated in the regional solid waste discussions and in fact the BOCC continues to support that participation.

Bradley

Dear Mr. Arnold:

I am writing to follow up on a letter from Commissioner Gary Bartell dated July 21, 2009 to your Chairman, Mr. Garry Breeden regarding whether or not Sumter County would be interested in participating in informal discussions about the possibility of regionalization of solid waste disposal.

Please let me know if your County has had an opportunity to discuss and if there has been any decision made regarding the inquiry. I would greatly appreciate any information you are able to provide.

If you have any questions or need additional information from me, please let me know.

Thank you.

To whom it may concern:

Please be advised The Refuge at Jumper Creek, Inc. intends to apply to The State of Florida Office on Homelessness for **Federal Emergency Shelter Grants Program-Facility Proposal**, due September 22nd 2009.

The Refuge has been working closely with the continuum of care to figure out the greatest need that there is in this community. The top needs were family housing that may be needed after temporary job loss or disaster (fire, tornado etc.) and youths that were aging out of the foster care system.

We intend to request funds to operate 3 transitional homes at the mobile home park which will include set up and operation expenses like furnishings, energy star appliances, security system, maintenance, insurance, and would include a salary of a case manager that would work directly with the residents to get them to a point of self sufficiency.

The Refuge at Jumper Creek, Inc mailing address is 4404 SE 6th Way, Bushnell, FL 33513 one of the transitional homes is located at 4912 SE 7th Drive.

Respectfully,

 Paul Genz

Brad,

Attached is the info we provided for the church doing work for recipients of their work. There is no prohibition we know of in the statutes to waive impact fees for not-for-profits, but it would require an ordinance revision. We have revised the ordinance to provide for a hardship waiver where a mobile home may be placed at residence for care of family. I believe the mobile home requires removal after it is no longer used for that need.

Michael M. Wald
2192 Willow Grove Way
The Villages, FL 32162

Dear Mr. Wald:

We are in receipt of your letter concerning 40 Days of Helping Hands Project, and the organizations requirement to pay assessment and impact fees on the new homes your organization builds for County residents.

Although this is an excellent service that is provide to the community, currently Sumter County Ordinances do not allow waiver of fees on new permits issued to a non-profit agency for construction of residential structures. As you noted, our ordinances do allow impact and assessment fee waivers on any projects that replace existing structures.

To insure that your agency was not being treated any different to similar agencies, the Impact and Assessment Department has reviewed permits issued to Habitat for Humanity and Sumter County Housing Department. Both of these agencies provide similar type services, and also pay impact and assessment fees on their building permits.

Should you have any other questions or concerns please do not hesitate in contacting us.

Sincerely,

Bradley Arnold
County Administrator

Subject: LOA for SECO

Mr. Arnold, Sumter Electric is technically not a government entity, however we would like to extend them the same discounts as we offer to our government customers Due to some new audit requirements we need to have a Letter of Authorization (LOA) on file to extend government discounts to Contractors like Sumter Electric. . This LOA would be simple and we need the proper contact to verify that SECO is a utility provider in the County. Would you be the proper contacts to provide that letter? If so I will forward your information to our staff so they can draft a letter for you to review and sign.

Thank you much for your assistance and please call me if you have any question or can offer any feedback.

Regards,

Vance Kibler, Public Sector Account Manager, Florida | Sprint Nextel | 3030 N Rocky Point Drive West, Suite 650 | Tampa, FL | 33607 | Cell 813 299 2977 | BB PIN 32C706A6

August 27, 2009

John Wayne Smith, Legislative Director
Florida Association of Counties
100 S. Monroe St.
Tallahassee, FL 32301

Dear Mr. Smith:

As you may be aware, during the last legislative session the Florida House of Representatives passed a bill to allow Florida to consider opening its waters to off shore energy exploration. In short, the bill would have allowed the Governor and Cabinet (sitting as the Trustees of the Internal Improvement Trust Fund) to receive, review, and then accept or reject in the Cabinet's sole discretion, proposals for exploration and production of oil and natural gas in Florida's state waters. The discussion of this issue is ongoing and legislation on this issue will again be proposed at the next Session.

I am writing to you and your organization because I know you may have opinions about this idea, and I would appreciate your constructive input on how it may be improved. Some of your opinions for modifying the proposal may be specific (e.g., requiring certain distances from shore for specific activities, specifying types of equipment to be used, establishing environmental protection methodologies or protocols, etc.), while others may be more general. I also would like your suggestions regarding where potential revenues from energy production in Florida should be directed.

It is our intention for this to be an inclusive process and to examine all options and gather input from any individuals or groups interested in participating in the debate. While I have been clear in my support for lifting the ban on exploration, I am also very interested to know your ideas, thoughts, questions and concerns about this very important issue.

I would appreciate your reply and input as soon as possible and preferably by the first week in September. Please feel free to contact me or my staff director if you have any questions regarding this letter and its purpose. We thank you for your consideration and look forward to your reply.

Sincerely,

Dean Cannon
State Representative

Re: Placement of Three (3) Mobile Homes on Parcel N04=0200

Dear Mrs. Genz:

This letter is to confirm that The Refuge at Jumper Creek, Inc. may place three additional mobile homes on the parcel N04=0200, as more particularly described as follows:

The SE ¼ of the SW ¼ of the SE ¼ of Section 3, Township 21 South, Range 22 East.

The subject property was approved as a mobile home park by the County in 1973 (6-73-6). The 1973 approval allowed up to a maximum of 13 mobile homes.

As of September 4, 2009, there are two (2) mobile homes on the property (permitted in 2005 and 2006). Your request to place three (3) additional mobile homes on the property, for a total of five (5) mobile homes, is permitted on the subject property under the following conditions:

- Placement of mobile homes shall be consistent with the attached site plan. Placement may be altered if needed to comply with setback requirements or other County regulations;
- The mobile homes shall be either Class A or Class B mobile homes as defined by the Sumter County Land Development Code;
- All appropriate building permits shall be obtained for the placement of the mobile homes;
- At time of building permitting for each new mobile home, a site plan prepared by a licensed surveyor shall be provided showing the location of the new mobile home in relation to the parcel boundaries and existing structures;

Memo

To: Bradley Arnold

From: Kathy Young

Date: 9/4/09

RE: The Refuge

My contact in Citrus County is on vacation for 2 weeks. His assistant stated they think very highly of the facility in their county. The facility is not individual units, but a registered rehab facility.

There is a need for emergency assistance in Sumter County, especially for those who are displaced from a fire, disaster or job loss.

If you want further information, please let me know.

Mr. Jim Judge
Executive Director
Lake-Sumter EMS
2761 West Old Highway 441
Mount Dora, FL 32757

RE: Sumter County Fire Rescue Advance Life Support Intent

Dear Mr. Judge,

We did appreciate the meeting held on September 3, 2009 to clarify the concerns you raised from our June 12, 2009 letter.

To summarize the clarifications we offer the following:

Sumter County Fire Rescue (SCFR) desires to provide an enhanced level of emergency medical care to the citizens of Sumter County. This goal includes providing first response, Advanced Life Support (ALS) non-transport services.

As previously indicated, the initial plan to providing ALS first response service delivery is by utilizing the department's current Shift Commanders. All three of the department's Shift Commanders are currently state certified paramedics, who could provide ALS care from their command vehicle. This practice would be very similar in concept to the way Lake-Sumter EMS (LSEMS) delivers care from their Quick Response Vehicles (QRV). The original plan was for SCFR Shift Commanders (paramedics) to function under an ALS memorandum of understanding (MOU) with LSEMS. This would allow our paramedics to deliver ALS care while working under the medical protocols and direction of the LSEMS Medical Director. This arrangement, would not necessarily require the supervisors vehicle to be permitted, however, permitting is an option. F.S. Chapter

401.26 indicates that "a permit is not required for an advanced life support non-transport vehicle that is intended to be used for scene supervision, incident command, or the regulation of supplies." This vehicle meets that description, as its primary function is scene supervision/incident command.

If the department was to seek its own Certificate of Public Convenience and Necessity (COPCN) and ALS non-transport license, it appears that permitting of the vehicle would then be required under F.S. 401.25, and would occur if that direction were taken. If that is the condition in which LSEMS desire our vehicles to be certified then we are prepared to do so.

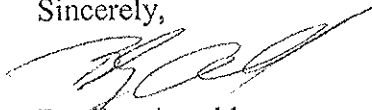

The concept of operation of this specific supervisor's vehicle would not change from its current function of day-to-day fire service supervision. However, by adding the ALS first response, the assigned personnel will be able to provide a higher level of care first in the instances when the ambulance response is slower or delayed.

The expectation is that the Shift Commander's vehicle would be available 24 hours a day, seven days a week which is how the positions are currently staffed with the department's three paramedic Shift Commanders. It is understood that with vacation and sick leave there needs to be redundancy to the system to which the current command staff and reserve paramedics can provide that redundancy.

Quality patient care should start at the top of the organization. Having supervisory/command personnel functioning at the ALS level will help ensure quality patient care throughout the system. Sumter County Fire Rescue is requiring that all of its Shift Commanders be State Certified Paramedics, so it only makes sense and it is certainly our intention that our Shift Command Unit be capable of providing Advanced Life Support. At the Sumter County Fire Rescue Department's current rate of growth, we see this is the most logical step towards our ability to provide a more inclusive level of ALS service for Sumter County in the future.

We look forward to our meeting with the State of Florida Bureau of EMS Director, Mr. John Bixler to ensure we are following the correct steps in this process.

Sincerely,

Bradley Arnold
County Administrator
